TWINE

*A wide range for horticultural applications*

 **reyenvas**

  
GRUPO  
armando  
alvarez

With nearly 50 years of experience, and integrated since 1977 into one of the largest plastic manufacturers in Europe (The Armando Álvarez Group), Reyervas is a leader in the manufacture of twine for a wide variety of applications in horticulture.

The privileged location of our main plant in one of the most industrialised areas of Seville, together with our auxiliary facility in the town of El Ejido (Almería) and the availability of a wide commercial and distribution network, means we can work on site next to our customers where and when we are needed. Indeed, our customers' satisfaction is our main motivation.

# Working the present to build the future

Our products are specially designed for use as support for proper growth of horticultural crops. We offer material made in different colours and lengths depending on the crop to which it is intended, guaranteeing optimal plant development.

# Our pledge to sustainability: Biotutor

As a last novelty in our product list, we present BIOTUTOR TWINE 100% compostable, and specially designed as a guide and support of crops under greenhouse. Its properties according to Test ISO 4167 are:

Dimensional Properties	Typical Value		Unit
Title	550	700	mts/kg
<b>Spool's characteristics</b>			
Length	2.750	3.500	m
Height	26	26	cm
Diameter	20	20	cm

With a significant contribution to environmental conservation, replacing traditional polypropylene and allowing waste treatment plants to reduce separation costs, as it is designed for an industrial composting process in conjunction with the plant mass.

**Product is 100% Biocompostable according to EN 13432.**

## Ecotutor

Flat twine for plant support: R1000:5kg / black

Our work and experience in the use of high quality recycled materials allows us to offer a reliable and high performance product, thus contributing to a more sustainable world.
